

CrewComp Calc – Simple User Manual

Welcome to your **CrewComp Calc**! This is a simple tool built just for crew members to help you see exactly how much money you will take home on payday. You don't need to do any math or count your hours. All you have to do is type in the **date** and the **military time** you checked in and out, and the calculator does the rest automatically!

Introduction

CrewComp Calc is a simple, automatic salary calculator made just for restaurant crew members. Instead of guessing your pay or trying to do complicated math, this tool does all the hard work for you. All you have to do is type in the **date** and the **military time** you check in and check out for your shifts.

Quick Guide to Military Time

Instead of using AM or PM, this calculator uses a 24-hour clock. Here is a quick cheat sheet for your afternoon and evening shifts:

- **1:00 PM** = 13:00
- **3:00 PM** = 15:00
- **5:00 PM** = 17:00
- **8:00 PM** = 20:00
- *Tip: For any time after 12:00 noon, just add 12 to the hour! (Example: 4 PM + 12 = 16:00)*

How to Use the Calculator (Step-by-Step)

Open your **CrewComp Calc** file on your phone or computer (using Excel or Google Sheets) and follow these easy steps:

Step 1: Type the Date

In the first box, type the day you worked (for example: 05/27/2026).

Step 2: Type your Check In and Check Out Times

- **Check In:** Type the military time you started your shift (for example, if you started at 8:00 AM, type 08:00).
- **Check Out:** Type the military time you finished your shift (for example, if you left at 4:30 PM, type 16:30).

Step 3: See your Results!

Once you type your times, **stop typing!** The calculator will instantly and automatically show you:

- **Hours Worked:** Exactly how many hours and minutes you worked.
- **OT (Overtime): * Total of OT:** Shows the number of extra hours you worked past your normal shift.
 - **Overtime Rate / Paid:** Shows the extra money you earned for those overtime hours.
- **ND (Night Differential - Graveyard Shift): * Total of ND:** Shows how many hours you worked late at night (between 10:00 PM and 6:00 AM).
 - **Rate of ND / Paid:** Shows the bonus money you get just for working those tough late-night hours!

Step 4: See Your Final Take-Home Pay!

Look at the very last boxes to see your final paycheck results:

1. **Gross Daily Pay:** This is all your money added together (Normal hours + Overtime pay + Night bonus) *before* taxes are taken out.
2. **Taxes (Deductions):** The money automatically taken out for the government.
3. **Net Pay (Take-Home Pay): This is your final number!** This is the exact amount of cash that will be put into your bank account on payday.

Important Tips to Remember

- **Always use the Colon (:):** When typing your time, make sure to put the dots in the middle. Type 14:00. Do **not** type 1400 or 2 PM, or the calculator will get confused.
- **Only Type in the 3 Shift Boxes:** Only type in the **Date**, **Check In**, and **Check Out** boxes. Do not try to type inside the pay or tax boxes, or you might accidentally break the automatic formulas!
